	tion σ kg. It is known that		

leop	distributions of the weights of male and female leopards are independent of each other. A male and a female leopard are each chosen at random.
(c)	Find the probability that both the weights of these leopards are less than 46 kg. [4]

	$9709_s22_qp_51~Q:5$ lengths, in cm, of the leaves of a particular type are modelled by the distribution N(5.2, 1.5 ²).
(a)	Find the probability that a randomly chosen leaf of this type has length less than 6cm. [2]
mea long	lengths of the leaves of another type are also modelled by a normal distribution. A scientist sures the lengths of a random sample of 500 leaves of this type and finds that 46 are less than 3 cm g and 95 are more than 8 cm long. Find estimates for the mean and standard deviation of the lengths of leaves of this type. [5]

(c)	In a random sample of 2000 leaves of this second type, how many would the scientist expect to find with lengths more than 1 standard deviation from the mean? [4]

278. 9709_s22_qp_52 Q: 4

٠	

The weights of bags of rice produced by Binders are normally distributed with mean $2.55\,\mathrm{kg}$ and standard deviation $\sigma\,\mathrm{kg}$. In a random sample of 5000 of these bags, 134 weighed more than $2.6\,\mathrm{kg}$.

(b)	Find the value of σ .	[4]

 $279.\ 9709_s22_qp_52\ Q\hbox{:}\ 5$

In a large college, 28% of the students do not play any musical instrument, 52% play exactly one musical instrument and the remainder play two or more musical instruments.

A random sample of 12 students from the college is chosen.

	Find the probability that more than 9 of these students play at least one musical instrument.
•	
•	
٠	
•	
•	
•	

A random sample of 90 students from the college is now chosen.

Use an approximation to find the probability that fewer than 40 of these students play exactly one musical instrument. [5]

 $280.\ 9709_s22_qp_53\ Q\hbox{:}\ 5$

Farmer Jones grows apples. The weights, in grams, of the apples grown this year are normally distributed with mean 170 and standard deviation 25. Apples that weigh between 142 grams and 205 grams are sold to a supermarket.

(a)	Find the probability that a randomly chosen apple grown by Farmer Jones this year is sold to the supermarket.

[3]

Farmer Jones sells the apples to the supermarket at \$0.24 each. He sells apples that weigh more than 205 grams to a local shop at \$0.30 each. He does not sell apples that weigh less than 142 grams.

The total number of apples grown by Farmer Jones this year is 20 000.

(b) Calculate an estimate for his total income from this year's apples.

Fari	armer Tan also grows apples. The weights, in	n grams, of the apples grown this year follow the
Farr list	istribution N(182, 20^2). 72% of these apples ha	we a weight more than w grams.

The lengths of the leaves of a particular type of tree are modelled by a normal distribution. A scientist measures the lengths of a random sample of 500 leaves from this type of tree and finds that 42 are less than 4 cm long and 100 are more than 10 cm long.

(a)	Find estimates for the mean and standard deviation of the lengths of leaves from this type of tree. [5]

The lengths, in cm, of the leaves of a different type of tree have the distribution $N(\mu, \sigma^2)$. The scientist takes a random sample of 800 leaves from this type of tree.

and $\mu + 2\sigma$.		[4]

288. $9709_s21_qp_53~Q:7$

In the region of Arka, the total number of households in the three villages Reeta, Shan and Teber is 800. Each of the households was asked about the quality of their broadband service. Their responses are summarised in the following table.

		Quality	Quality of broadband service		
		Excellent	Good	Poor	
	Reeta	75	118	32	
Village	Shan	223	177	40	
	Teber	12	60	63	

(a)	(i)	Find the probability that a randomly chosen household is in Shan and has poor broadband service.
((ii)	Find the probability that a randomly chosen household has good broadband service given that the household is in Shan. [2]
		ole of Arka there are a large number of households. A survey showed that 35% of households ave no broadband service.
(b)	(i)	10 households in Arka are chosen at random.
		Find the probability that fewer than 3 of these households have no broadband service. [3]

339. 9709 m16 qp 62 Q: 7

The times taken by a garage to fit a tow bar onto a car have a normal distribution with mean m hours and standard deviation 0.35 hours. It is found that 95% of times taken are longer than 0.9 hours.

- (i) Find the value of m. [3]
- (ii) On one day 4 cars have a tow bar fitted. Find the probability that none of them takes more than 2 hours to fit. [5]

The times in hours taken by another garage to fit a tow bar onto a car have the distribution $N(\mu, \sigma^2)$ where $\mu = 3\sigma$.

(iii) Find the probability that it takes more than 0.6μ hours to fit a tow bar onto a randomly chosen car at this garage. [3]

```
340. 9709 s16 qp 61 Q: 1
```

The height of maize plants in Mpapwa is normally distributed with mean $1.62 \,\mathrm{m}$ and standard deviation $\sigma \,\mathrm{m}$. The probability that a randomly chosen plant has a height greater than $1.8 \,\mathrm{m}$ is 0.15. Find the value of σ .

Plastic drinking straws are manufactured to fit into drinks cartons which have a hole in the top. A straw fits into the hole if the diameter of the straw is less than 3 mm. The diameters of the straws have a normal distribution with mean 2.6 mm and standard deviation 0.25 mm.

- (i) A straw is chosen at random. Find the probability that it fits into the hole in a drinks carton. [3]
- (ii) 500 straws are chosen at random. Use a suitable approximation to find the probability that at least 480 straws fit into the holes in drinks cartons. [5]
- (iii) Justify the use of your approximation.

$$342.\ 9709_s16_qp_62\ Q:\ 2$$

When visiting the dentist the probability of waiting less than 5 minutes is 0.16, and the probability of waiting less than 10 minutes is 0.88.

(i) Find the probability of waiting between 5 and 10 minutes.

A random sample of 180 people who visit the dentist is chosen.

(ii) Use a suitable approximation to find the probability that more than 115 of these people wait between 5 and 10 minutes. [5]

343. 9709 s16 qp 62 Q: 6

The time in minutes taken by Peter to walk to the shop and buy a newspaper is normally distributed with mean 9.5 and standard deviation 1.3.

- (i) Find the probability that on a randomly chosen day Peter takes longer than 10.2 minutes. [3]
- (ii) On 90% of days he takes longer than t minutes. Find the value of t. [3]
- (iii) Calculate an estimate of the number of days in a year (365 days) on which Peter takes less than 8.8 minutes to walk to the shop and buy a newspaper. [3]

344. 9709_s16_qp_63 Q: 5

The heights of school desks have a normal distribution with mean 69 cm and standard deviation σ cm. It is known that 15.5% of these desks have a height greater than 70 cm.

(i) Find the value of σ .

When Jodu sits at a desk, his knees are at a height of 58 cm above the floor. A desk is comfortable for Jodu if his knees are at least 9 cm below the top of the desk. Jodu's school has 300 desks.

(ii) Calculate an estimate of the number of these desks that are comfortable for Jodu. [5]

 $345.9709_s16_qp_63$ Q: 7

Passengers are travelling to Picton by minibus. The probability that each passenger carries a backpack is 0.65, independently of other passengers. Each minibus has seats for 12 passengers.

- (i) Find the probability that, in a full minibus travelling to Picton, between 8 passengers and 10 passengers inclusive carry a backpack. [3]
- (ii) Passengers get on to an empty minibus. Find the probability that the fourth passenger who gets on to the minibus will be the first to be carrying a backpack. [2]
- (iii) Find the probability that, of a random sample of 250 full minibuses travelling to Picton, more than 54 will contain exactly 7 passengers carrying backpacks. [6]

346. 9709 w16 qp 61 Q: 4

Packets of rice are filled by a machine and have weights which are normally distributed with mean 1.04 kg and standard deviation 0.017 kg.

- (i) Find the probability that a randomly chosen packet weighs less than 1 kg. [3]
- (ii) How many packets of rice, on average, would the machine fill from 1000 kg of rice? [1]

The factory manager wants to produce more packets of rice. He changes the settings on the machine so that the standard deviation is the same but the mean is reduced to μ kg. With this mean the probability that a packet weighs less than 1 kg is 0.0388.

(iii) Find the value of μ . [3]

(iv) How many packets of rice, on average, would the machine now fill from 1000 kg of rice? [1]

[3]

[3]

```
347. 9709 w16 qp 62 Q: 3
```

On any day at noon, the probabilities that Kersley is asleep or studying are 0.2 and 0.6 respectively.

- (i) Find the probability that, in any 7-day period, Kersley is either asleep or studying at noon on at least 6 days.
- (ii) Use an approximation to find the probability that, in any period of 100 days, Kersley is asleep at noon on at most 30 days. [5]

$$348.9709 \text{ w} 16 \text{ qp} 62 \text{ Q: } 4$$

The time taken to cook an egg by people living in a certain town has a normal distribution with mean 4.2 minutes and standard deviation 0.6 minutes.

(i) Find the probability that a person chosen at random takes between 3.5 and 4.5 minutes to cook an egg. [3]

12% of people take more than t minutes to cook an egg.

(ii) Find the value of
$$t$$
. [3]

(iii) A random sample of n people is taken. Find the smallest possible value of n if the probability that none of these people takes more than t minutes to cook an egg is less than 0.003. [3]

The weights of bananas in a fruit shop have a normal distribution with mean 150 grams and standard deviation 50 grams. Three sizes of banana are sold.

Small: under 95 grams

Medium: between 95 grams and 205 grams

Large: over 205 grams

- (i) Find the proportion of bananas that are small.
- (ii) Find the weight exceeded by 10% of bananas.

The prices of bananas are 10 cents for a small banana, 20 cents for a medium banana and 25 cents for a large banana.

- (iii) (a) Show that the probability that a randomly chosen banana costs 20 cents is 0.7286. [1]
 - (b) Calculate the expected total cost of 100 randomly chosen bananas. [3]

$$350.\ 9709_w16_qp_63\ Q{:}\ 7$$

Each day Annabel eats rice, potato or pasta. Independently of each other, the probability that she eats rice is 0.75, the probability that she eats potato is 0.15 and the probability that she eats pasta is 0.1.

- (i) Find the probability that, in any week of 7 days, Annabel eats pasta on exactly 2 days. [2]
- (ii) Find the probability that, in a period of 5 days, Annabel eats rice on 2 days, potato on 1 day and pasta on 2 days. [3]
- (iii) Find the probability that Annabel eats potato on more than 44 days in a year of 365 days. [5]

[1]

351. 9709 s15 qp 61 Q: 1

The lengths, in metres, of cars in a city are normally distributed with mean μ and standard deviation 0.714. The probability that a randomly chosen car has a length more than 3.2 metres and less than μ metres is 0.475. Find μ .

352. 9709 s15 qp 61 Q: 6

- (i) In a certain country, 68% of households have a printer. Find the probability that, in a random sample of 8 households, 5, 6 or 7 households have a printer. [4]
- (ii) Use an approximation to find the probability that, in a random sample of 500 households, more than 337 households have a printer. [5]
- (iii) Justify your use of the approximation in part (ii).

353.9709 s15 qp 62 Q: 7

- (a) Once a week Zak goes for a run. The time he takes, in minutes, has a normal distribution with mean 35.2 and standard deviation 4.7.
 - (i) Find the expected number of days during a year (52 weeks) for which Zak takes less than 30 minutes for his run. [4]
 - (ii) The probability that Zak's time is between 35.2 minutes and t minutes, where t > 35.2, is 0.148. Find the value of t.
- (b) The random variable X has the distribution $N(\mu, \sigma^2)$. It is given that P(X < 7) = 0.2119 and P(X < 10) = 0.6700. Find the values of μ and σ .

354. 9709 s15 qp 63 Q: 1

The weights, in grams, of onions in a supermarket have a normal distribution with mean μ and standard deviation 22. The probability that a randomly chosen onion weighs more than 195 grams is 0.128. Find the value of μ .

355. 9709 s15 qp 63 Q: 3

On a production line making cameras, the probability of a randomly chosen camera being substandard is 0.072. A random sample of 300 cameras is checked. Find the probability that there are fewer than 18 cameras which are substandard.

356. 9709 s15 qp 63 Q: 5

The heights of books in a library, in cm, have a normal distribution with mean 21.7 and standard deviation 6.5. A book with a height of more than 29 cm is classified as 'large'.

- (i) Find the probability that, of 8 books chosen at random, fewer than 2 books are classified as large.
- (ii) n books are chosen at random. The probability of there being at least 1 large book is more than 0.98. Find the least possible value of n. [3]

357.9709 w15 qp 61 Q: 2

The random variable X has the distribution $N(\mu, \sigma^2)$. It is given that P(X < 54.1) = 0.5 and P(X > 50.9) = 0.8665. Find the values of μ and σ .

358. 9709 w15 qp 61 Q: 4

(a) Amy measured her pulse rate while resting, x beats per minute, at the same time each day on 30 days. The results are summarised below.

$$\Sigma(x - 80) = -147$$
 $\Sigma(x - 80)^2 = 952$

Find the mean and standard deviation of Amy's pulse rate.

[4]

(b) Amy's friend Marok measured her pulse rate every day after running for half an hour. Marok's pulse rate, in beats per minute, was found to have a mean of 148.6 and a standard deviation of 18.5. Assuming that pulse rates have a normal distribution, find what proportion of Marok's pulse rates, after running for half an hour, were above 160 beats per minute. [3]

The faces of a biased die are numbered 1, 2, 3, 4, 5 and 6. The probabilities of throwing odd numbers are all the same. The probabilities of throwing even numbers are all the same. The probability of throwing an odd number is twice the probability of throwing an even number.

- (i) Find the probability of throwing a 3. [3]
- (ii) The die is thrown three times. Find the probability of throwing two 5s and one 4. [3]
- (iii) The die is thrown 100 times. Use an approximation to find the probability that an even number is thrown at most 37 times. [5]

- (a) A petrol station finds that its daily sales, in litres, are normally distributed with mean 4520 and standard deviation 560.
 - (i) Find on how many days of the year (365 days) the daily sales can be expected to exceed 3900 litres. [4]

The daily sales at another petrol station are X litres, where X is normally distributed with mean m and standard deviation 560. It is given that P(X > 8000) = 0.122.

(ii) Find the value of
$$m$$
. [3]

- (iii) Find the probability that daily sales at this petrol station exceed 8000 litres on fewer than 2 of 6 randomly chosen days. [3]
- (b) The random variable Y is normally distributed with mean μ and standard deviation σ . Given that $\sigma = \frac{2}{3}\mu$, find the probability that a random value of Y is less than 2μ . [3]

$$361.9709_{\mathrm{w}15_{\mathrm{qp}}63}$$
 Q: 4

The time taken for cucumber seeds to germinate under certain conditions has a normal distribution with mean 125 hours and standard deviation σ hours.

- (i) It is found that 13% of seeds take longer than 136 hours to germinate. Find the value of σ . [3]
- (ii) 170 seeds are sown. Find the expected number of seeds which take between 131 and 141 hours to germinate. [4]

 $362.9709_{w}15_{qp}_{63}$ Q: 7

A factory makes water pistols, 8% of which do not work properly.

- (i) A random sample of 19 water pistols is taken. Find the probability that at most 2 do not work properly. [3]
- (ii) In a random sample of n water pistols, the probability that at least one does not work properly is greater than 0.9. Find the smallest possible value of n. [3]
- (iii) A random sample of 1800 water pistols is taken. Use an approximation to find the probability that there are at least 152 that do not work properly. [5]
- (iv) Justify the use of your approximation in part (iii). [1]
